Yes. Thank you!

Pesticides are reviewed through our pesticides program under FIFRA, not under TSCA.

However, inert ingredients (eg not the pesticide active ingredient) in pesticide formulations do need to be reviewed under TSCA. So the answer is yes. For example last week we came to closure in the new chemicals program on an anti-foaming agent that is used in a pesticide formulation. The anti-foaming agent itself has no pesticidal properties.

Does this help?

Subject: TSCA question

Hi Nancy,

Do you know if there any chemicals that were cleared under the new chemical review program that will go on to be used by farmers?

Thanks,

James Hewitt
